# 5 free GitHub repos to build agents

Bookmark these before you pay for any course.

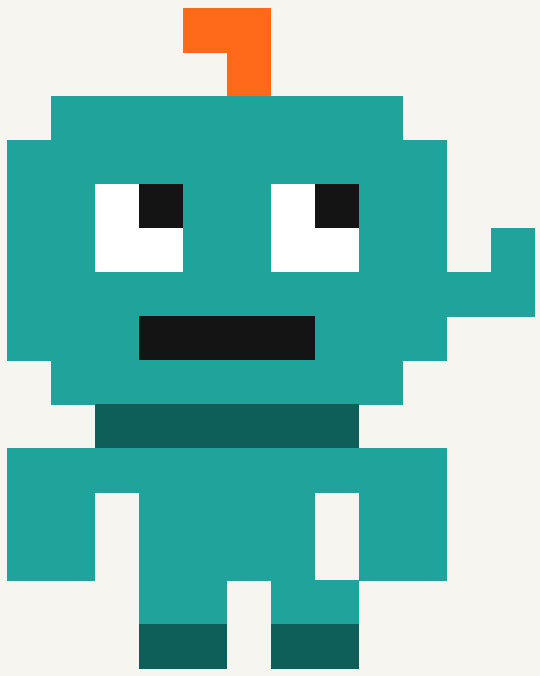

# 1. anthropics/claude-code

Claude Code itself: the agent that reads your repo, runs commands and edits files. Start here to see how a real coding agent is put together.

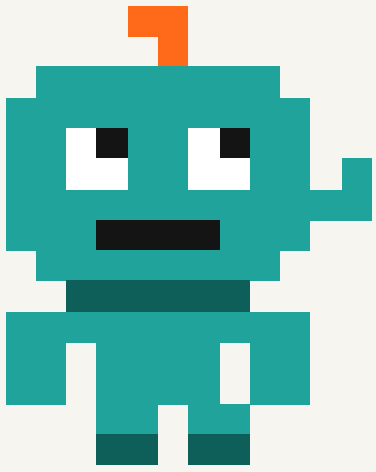

# 2. anthropics/skills

Official Agent Skills. A skill is a folder of instructions and scripts Claude loads only when it needs them. Copy one, change it for your own workflow.

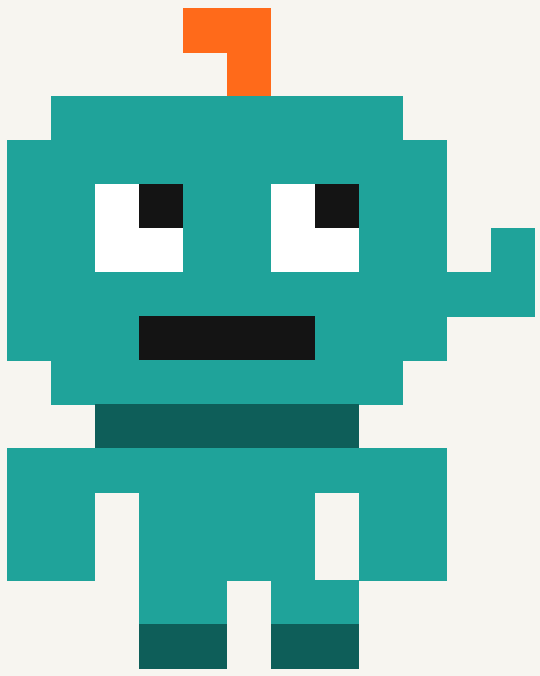

# 3. modelcontextprotocol/servers

Reference MCP servers. MCP is how you plug Claude into files, databases and APIs without writing a custom integration every time.

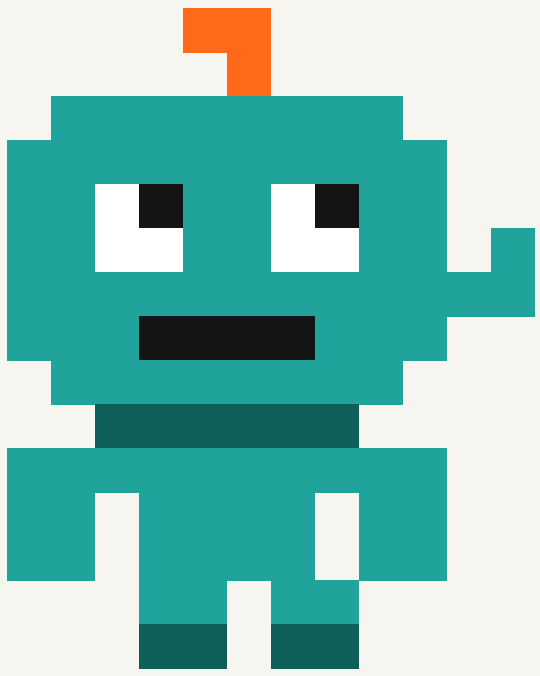

# 4. n8n-io/n8n

Open-source workflow automation you can self-host. Good for the boring glue around an agent: webhooks, schedules, Sheets, WhatsApp.

# 5. pipecat-ai/pipecat

Open-source framework for real-time voice agents. If you want your agent to answer phone calls, this is the layer that handles audio in and out.

# Want the setup order?

Comment REPOS and I'll DM you the guide with links and what to build first.
