I built an edtech platform for a

Gyannova: live classes for Class 9-12, CUET, CA and CMA students.

This is live

Real students use it.

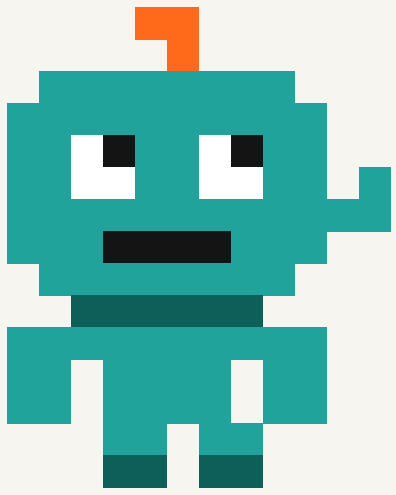

What I built

01 Razorpay payments

02 Zoom class access after payment

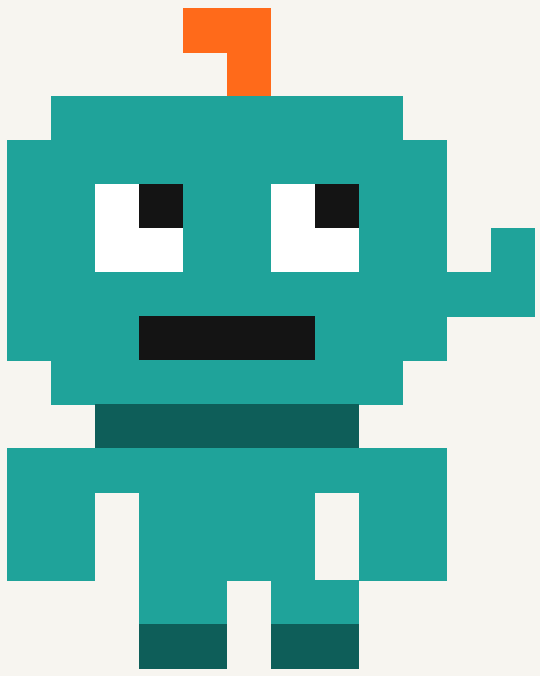

03 WhatsApp reminders

04 SEO + Google Business setup

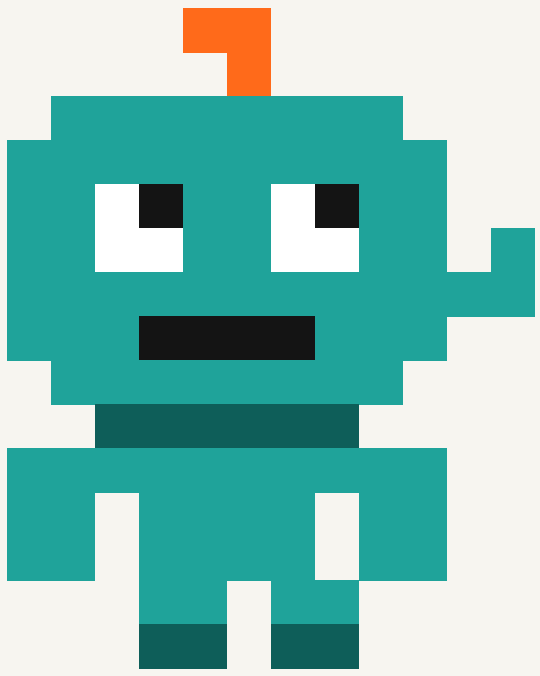

What broke

Things that worked on my laptop broke after deployment: emails, analytics, small config details. The real work started after launch day.

The lesson

A client doesn't pay for a website. They pay for students paying and getting into class without anyone sending links by hand.

Want the build checklist?

Comment BUILD and I'll DM you the launch checklist I use now.
