How to Build Your First AI Agent

From a simple chatbot to a system that executes real-world tasks. Here is the 4-level progression I follow.

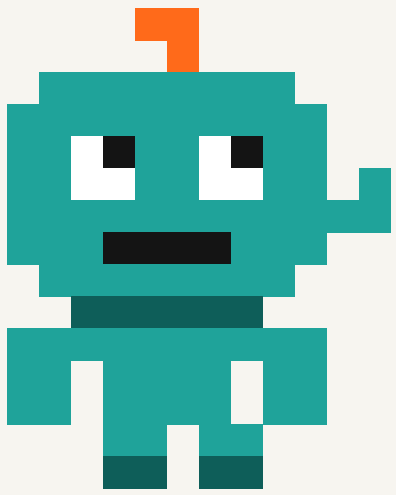

Level 1: The Chatbot

01 Single prompt input/output

02 No memory between sessions

03 Static knowledge base

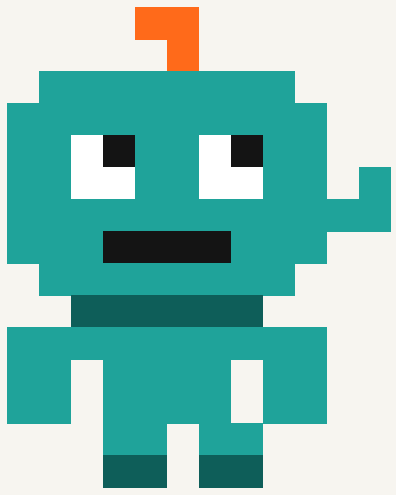

Claude

Level 2: The Tool User

01 Calls external APIs (Weather, DB)

02 Retrieves live data via RAG

03 Executes simple functions

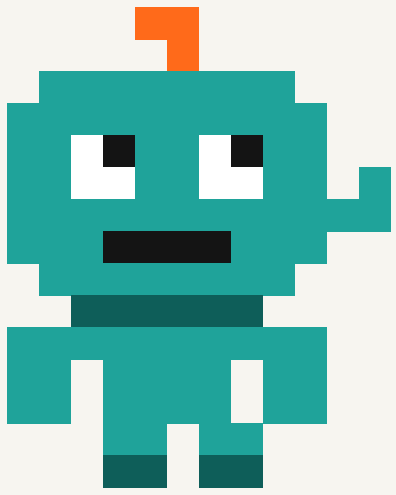

Level 3: The Planner

01 Breaks tasks into sub-steps

02 Uses memory for context

03 Self-corrects on errors

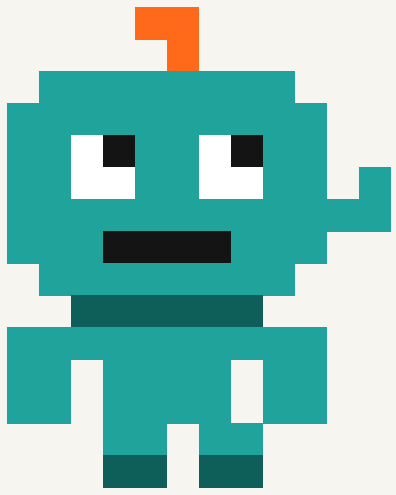

Level 4: The Autonomous Agent

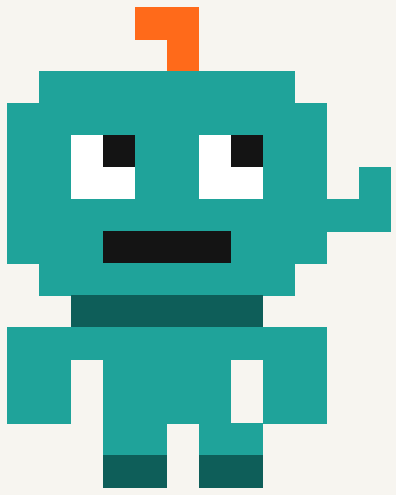

01 Long-running background tasks

02 Multi-tool orchestration

03 Independent decision making
